SUMMARY

Senior Frontend Engineer with 6+ years building production-grade React/Next.js applications across fintech, AI-hiring tech, and edtech. At Alert MFB, I own the frontend architecture for BucksInvest, a fintech investment platform comprising a customer portal and an admin console, working largely independently across the full software development lifecycle. At Sterling Bank, I had full product frontend ownership across learner, instructor, and admin surfaces, with automated CI/CD pipelines that reduced release effort by ~35%. At Polar Frequency, I built a WebRTC + Socket.IO AI interview platform that decreased live-session drop-off by ~26% and scaled i18n to 3 markets, driving ~34% non-English activation growth. Comfortable working independently with minimal supervision, defining technical approach directly with architects and stakeholders, and shipping high-quality software aligned to business goals.

SKILLS

Frontend: JavaScript (ES6+), TypeScript, React.js, Next.js (App Router), HTML5, CSS3, Tailwind CSS, Angular, Context API, Redux, RxJS, NgRx/Akita, React Query (TanStack Query), Jotai

Mobile: React Native, Expo, iOS & Android Development, Cross-Platform Development

Architecture & Performance: Software design & architecture, code splitting, lazy loading, dynamic imports, memoization, query caching, debounce/throttle, SSR/CSR optimization

Backend/APIs: Node.js, RESTful APIs, WebSocket, WebRTC, Payment Integration (Paystack, Flutterwave), NestJS, Go, C#, Java, Spring Boot, MediaRecorder API, Web Audio API, MediaPipe FaceMesh

Database: PostgreSQL, MongoDB

Testing & Quality: Jest, React Testing Library, Cypress, responsive design, cross-browser compatibility, accessibility (WCAG 2.1 AA)

Tools & Practices: Git, GitHub, GitLab, Bitbucket, CI/CD (GitHub Actions), Docker, Agile/Scrum, npm, yarn, Vercel, AWS Amplify, Azure, Figma, Postman, JIRA

Specialized: SEO Optimization, Performance Tuning, Web Security, Responsive Design

Soft Skills: Independent ownership, mentorship, cross-functional communication, leadership, problem-solving

EXPERIENCE

Senior Frontend Developer

Alert MFB **January 2026 - Present, Lagos, Nigeria**

- Own frontend architecture and delivery for BucksInvest, a fintech investment platform, working independently across the full SDLC from requirements through deployment and monitoring, with direct input into technical decisions alongside product and backend stakeholders.
- Built the customer investment portal end-to-end, integrating Dojah KYC verification and Paystack wallet payments through a secured backend-for-frontend layer, ensuring reliable identity verification and payment flows for real customer funds.
- Designed and shipped a role-based admin console giving operations and compliance teams granular control over users, transactions, and investment products, replacing manual, spreadsheet-driven oversight with a structured self-serve tool.
- Contributed to the NestJS backend powering BucksInvest's transaction and admin workflows, closing the loop between frontend and API design so features shipped without waiting on backend handoff.
- Wrote and maintained Jest/React Testing Library coverage for critical payment and KYC flows, and used Cypress for end-to-end testing of the admin console's approval pipelines, catching regressions before they reached production.
- Diagnosed and resolved integration issues with third-party services (Paystack, Dojah), keeping transaction data consistent across the platform.

Frontend Developer

Sterling Bank **June 2022 - May 2026, Lagos, Nigeria**

- Engineered multi-role platform (learner/instructor/employer/workforce) on Next.js + TypeScript, unifying B2C learning and B2B workforce upskilling into one surface and cutting duplicated product overhead by ~35%.
- Built full purchase funnel (course page to cart to checkout to entitlement) with Flutterwave integration, geo-aware NGN/USD pricing, and success/failure handling, improving checkout completion by ~18% and reducing payment support tickets by ~25%.

- Delivered a 6-step instructor course creation workflow with gated progression and validation, reducing time-to-publish by ~30% and enabling self-serve content operations.
- Engineered server-state architecture with React Query, Zustand, and Context, eliminating stale-state defects by ~40% and cutting perceived load time by ~25% via dynamic imports, skeleton loaders, and aggressive query refetch tuning.
- Built Next.js + TypeScript admin platform (learners, courses, payments, discounts, referrals, donations, withdrawals) with approval pipelines, paginated queues, and CSV export, reducing approval turnaround by ~40% and saving ops/finance ~10 hours of manual reporting per week.
- Delivered an executive analytics suite (KPI cards, revenue/growth/completion charts) and deep profile views, cutting support investigation time by ~35% and removing manual report assembly for leadership.
- Strengthened session reliability with Axios interceptors, token refresh, and role-based redirect, reducing unauthorized-session failures by ~40%, and improved deploy consistency via Docker + GitHub Actions CI/CD, cutting release cycle time by ~35%.
- Added SEO instrumentation (structured metadata, Clarity tracking hooks) and localization-ready formatting patterns supporting Turkey, Germany, and Saudi expansion, lifting organic landing performance by ~12%.

Frontend Developer

Polar Frequency **January 2021 - June 2022, Dubai, UAE**

- Engineered GogHR, a real-time AI interview platform using WebRTC, Socket.IO, and a streaming avatar stack on React/Next.js/TypeScript, reducing candidate drop-off during live sessions by ~26%.
- Architected a multilingual frontend (next-intl) across English, German, and Turkish, enabling market rollout in Turkey and Germany and lifting non-English user activation by ~34%.
- Built recruiter analytics dashboards (demographics, application metrics, usage funnels) with ApexCharts, cutting hiring decision cycles by ~40% and significantly reducing reporting turnaround.
- Optimized heavy UI surfaces via lazy loading, dynamic imports, and React Query tuning, cutting initial dashboard load time by ~43%.
- Shipped Stripe embedded checkout and subscription UX, driving a ~23% increase in paid-plan conversion, and integrated HubSpot + Google Ads attribution tracking, improving campaign-to-signup visibility by ~27%.
- Implemented interview integrity controls (tab-switch and idle-time telemetry) and AI transcript/PDF export workflows, reducing invalid sessions by ~33% and cutting recruiter evaluation time per candidate by ~28%.
- Standardized state and server-cache layer with Jotai and React Query patterns and enforced WCAG 2.1 AA (ARIA, keyboard nav, screen reader support), reducing stale UI support tickets by ~16%.

Frontend Developer

Vsonet Groups **January 2020 - December 2020, Lagos, Nigeria**

- Built and customized the company's primary platform website using WordPress, custom PHP, and responsive CSS frameworks, achieving a 40% increase in user engagement and a 35% boost in site traffic within 6 months through mobile-first design.
- Developed and deployed client-facing features for an e-commerce web application using React.js and Redux, implementing code splitting and lazy loading that reduced page load times by 30% and boosted user engagement by 25%.

EDUCATION

Master's in Information Technology

University of Lagos • Lagos, Nigeria

Bachelor of Science in Botany

University of Lagos • Lagos, Nigeria
